Made to shade!

Shading and energy saving screens

Fabrics for horticulture

High quality, long lasting,  
energy saving!  
For the perfect climate in  
your greenhouse

## REIMANN Shading screens

### „Made in Germany“

REIMANN has been pioneer in developing modern shading screens for more than 50 years. REIMANN shading screens are a top class horticultural product. Our success is based upon a close collaboration with gardeners and research institutes.

### Flame Retardant Screens

Disastrous fires, spread by highly flammable material, have destroyed complete greenhouses. Insurance companies now insist on the use of flame retardant screens for almost all types of greenhouse.

REIMANN screens carry the flame-retardant classification B1, thus limiting your risk and offering you greater security.

## ADVANTAGES

### Greenhouses

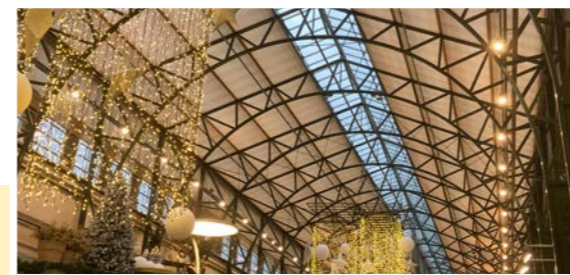

- High levels of energy saving
- Unsurpassed longevity
- Controlled standardized quality
- Very little shrinkage
- Excellent climate control
- Breathable – the humidity passes through the screen

### Garden centres

- A range of attractive colours for an individual appearance

Quality pays off!

## Energy Saving – Shading – Black Out – Screens

**PyROTEX®**

**REIMATEX®**

**ALUSCREEN®**

**REIMATEX®**

## REIMANN Energy saving screens

Percentage of shading from 30 – 100 %

Energy saving from 45 – 60 %

### Advantages of Twin Screens:

- Even more energy saving
- Flexible shading opportunities
- Improved climate control

### Advantages of double layer screens:

- Installed like a single screen
- High energy saving potential
